Introduction to Firefighting Optical Cables

Overview

Fireproof fiber optics are specialized cables engineered to withstand high temperatures and resist fire propagation. They are mainly installed in metro stations, tunnels, oil & gas. ETK Kablo 's fire-resistant fiber optic cables ensure continuous data transmission during fire conditions, safeguarding critical communication lines when reliability is most crucial. The cable has a design that ensures operation for more than 3 hours in fi es up to 1000 °C. In addition, also with water spray and. By adhering to EU safety standards, such as the Construction Products Regulation (CPR) and EN 50575, fireproof fiber optics enhance fire safety by promoting structural integrity, energy efficiency, and sustainable resource use. One key consideration is the classification of the flame-retardant performance of cables with the goal to prevent. English versions are available on request.
