Floating optical cable

Overview

A fiber floating machine uses high-pressure air to push fiber optic cable inside the duct. It provides considerations on the equipment to be used, and gives advice on steps to be performed, and on. The RST-FFC Series Floating Fiber Optic Cable is a buoyant fibre cable designed for marine surface communication, buoy systems, USV/UAV tethers, and emergency deployments. 92 g/cm³, it delivers stable positive buoyancy, keeping the cable afloat without ROV or diver support. Floating cables are designed for floating structures like oil rigs, docks. Made with foam PE/PP insulation to provide flotation. The series comprises three primary components designed to work together: The cable-end connector, designed for field assembly. When working with long distances, proper positioning is crucial – especially considering elevation changes and bends in the duct route. But I declined – I know what my equipment and I are capable of.
