721 Laboratory Spectrometer

Overview

721G/722G visible spectrophotometer enables quantitative and qualitative analysis of samples within the visible spectrum. It can be widely used in pharmaceutical manufacturing, health, clinical tests, biochemistry, petrochemical industry, environmental protection and quality control fields. Compact, durable design for reliable results. It covers a wavelength range from 350 to 1020 nanometers with a solid 6nm spectral bandwidth. The optical system uses a Czerny-Turner design with a 1200L/mm grating for good. The apparatus described in this manual is designed to be used by properly trained personnel in a suitable equipped laboratory. For the correct and safe use of this apparatus it is essential that laboratory personnel follow generally accepted safe procedures in addition to the safety precautions. PRECISE AND RELIABLE MEASUREMENTS The spectrophotometer features high photometric accuracy of ±1%T and photometric repeatability of 0. 5%T, so you can rely on its measurements. In addition, it has a stability of ±0.
