PoE Network Switch Specifications

Overview

There are different types of PoE switches, including PoE (IEEE 802. 3af), which supplies up to 15. Cisco ® Catalyst ® 9200 Series switches extend the power of intent-based networking and Catalyst 9000 hardware and software innovation to a broader set of deployments. This allows a single cable to provide both a data connection and enough electricity to power networked devices such as wireless access points. The UniFi Switch is a fully managed, PoE+ Gigabit switch, delivering robust performance and intelligent switching for growing networks. The UniFi Switch offers the forwarding capacity to simultaneously process trafic on all ports at line rate without any packet loss. Lantronix's full line of network PoE switches which support multiple applications, including a complete family of Power-over-Ethernet switch (PoE switch) and. Automatically reboots your dropped or unresponsive PoE-powered devices. Simply plug and play for instant connectivity with no configuration required. Fanless design reduces power consumption and ensures silent operation, ideal for noise-sensitive homes or businesses. Disclaimers *PoE budget. POE (Power over Ethernet) switch is a switch that can power network devices.

© 2026 All-In-One Fiber & Power Infrastructure - All rights reserved

Standards-based Power over Ethernet is implemented following the specifications in IEEE 802.3af-2003 (which was later incorporated as Clause 33 into IEEE 802.3-2005) or the 2009 update, IEEE 802.3at. The standards require Category 5 cable or better for high power levels but allow using Category 3 cable if less power is required. In multi-pair cases, PoE supplies power as a common-mode signal over two or more of the differential pairs
