

AP Fiber Optic Switch

Overview

These fiber switches offer a cost-effective way to provide flexibility in optical network connectivity. Applications include optical protection, optical channel monitoring, remote fiber test systems (RFTSs), remotely reconfigurable add-drop multiplexers, etc. Various port sizes are available ranging from 4 up to 52 ports. We offer solutions that provide seamless transmission and conversion. We produce a wide range of turn-key fiberoptic switch systems that integrate fiber components with electronics, firmware, with all computer/internet interface formats having user-friendly graphics software and a command list for customer-specific integration. These systems are configured based on. GAOTek Fiber Optical Network Switch 10 GE Switches deliver 10 GE downlink and 100 GE uplink connectivity for enterprise campuses, carriers, higher education institutions, and governments, integrating native Wireless Local Area Network (WLAN) Access Controller (AC) capabilities to support up to 1024. Fiber optic switches, multiplexers and demultiplexers block or route optical signals in a fiber optic network. Where switches simply block or pass optical signals on individual or multiple channels, multiplexers route multiple channels out to a single fiber optic cable. These APs are designed to handle large numbers of devices or users simultaneously and provide better coverage in large areas such as offices, schools, or public spaces.
