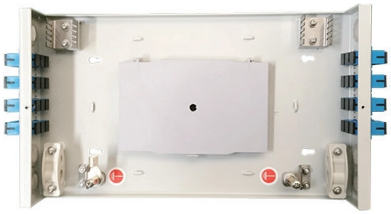
The computer room cabling system includes



Overview

Structured cabling components include twisted pair, optical cabling, patch panels, patch cables and equipment rooms. Structured cabling is the design and installation of a cabling system that will support multiple hardware uses and be suitable for today's needs and those of the. Structured cabling is the standardized approach to network infrastructure, ensuring consistency, scalability, and reliability across telecommunications networks. Four of these elements are shown in Structured Cabling Examples section. With a. Equipment room: The central hub where core network gear (switches, servers, routers) and the main cross-connect live, built for scalability, cooling, power management, secure access, and routine maintenance. Backbone cabling: High-capacity “vertical” links (often fiber or high-grade copper). The framework for successful data cabling has six subsystems.
