

After the fiber optic cable enters the junction box

Overview

After an optical cable arrives at the user's end, it is fixed in the terminal box. These boxes are similar to MDF in telephone exchanges. What is a fiber optic junction box?

A fiber optic junction box, also known as an optical network termination (ONT) or fiber outlet, is a device that is installed at the end of a fiber optic cable. It converts the data transmitted by light signals into electrical signals that can be processed by. This article provides an in-depth comparison of fiber terminal boxes and junction boxes to help clarify their differences and deepen your understanding. The terminal box is a fiber management product used to distribute and protect optical fiber links in FTTH networks. A fiber pigtail is a specific hardware connection used for cable termination.
