

Cable tray support grounded separately

Overview

60 of the NEC requires metallic cable trays that support electrical conductors shall be grounded as required for conductor enclosures in accordance with 250. 96 and Section IV of Article 250. Cable tray may be used as the Equipment Grounding Conductor (EGC) in any installation where qualified persons will service the installed cable tray system. Here's what you need to know: Cable Types: Only use. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. Cable tray systems have become an essential component in the infrastructure of modern commercial buildings, smart offices, data centers, and various industrial facilities. For galvanized cable troughs.
