

Desktop plug-in loss meter for campus network low-loss retail

Overview

This 2-slot plug-in module operates at both 1310nm and 1550nm wavelengths, making it suitable for single-mode fiber applications. With its FC/APC connectors, this meter ensures secure and reliable connections for accurate testing of insertion loss (IL) and return loss. To measure the power and loss in optical fibers, the MAP system offers modules for power measurement and return loss; attenuators and back reflectors are also available. Based on domestic customers'. Tier-1 certification kit with power meter and light source, compatible with multiple duplex and multi-fiber connectors up to 24 fibers. Measures loss, length, and polarity in just 1 second, as per certification standards. Native duplex and multifiber (up to 24 fibers). The JDSU passive component/connector test solution (PCT) consists of a powerful family of modules, software, and peripherals for testing IL, RL, physical length, and polarity of optical connectivity products.
