

Does fiber optic cable place high demands on the main router

Overview

Fiber routers are able to handle higher bandwidth demands and offer lower latency, making them ideal for streaming, gaming, and other high-demand activities. A fiber router is designed to work specifically with fiber optic internet connections, providing faster and more reliable speeds compared to a normal router that typically works with traditional broadband connections. The technology's been in use since the late 1970s, and it forms the majority of the global internet's backbone networks. Before diving into the connection process, gather these critical components: Optical Network Terminal (ONT): The cornerstone of most fiber setups, typically provided by your ISP. This. Running copper Ethernet cables and coax cables outdoors can put your entire home or office network at risk for power surges from lightning strikes. Does anyone have experience with this or know if it's possible?

If so, what equipment would I need to make this setup.
