

Fire protection away from cable trays

Overview

Pair trays with low-smoke, halogen-free cables in occupant areas to reduce toxic fumes. Use fire barriers, covers, and dividers to contain flame spread, especially at crossings, risers, and penetrations. Maintain clear separation between power and data circuits, and between. ProReact Linear Heat Detection (LHD) offers a proven solution. Engineered for continuous monitoring and early warning, our cable-based detection system is ideal for protecting cable trays—whether single-tier, multi-tier, or densely packed. Effective protection of cable systems around the world: our tried-and-tested FLAMMOTECT-A and DG-CR 0. 7 products are successfully used to protect cables in high-rise buildings. Scope: Firestopping for busway, cable trays, cables, and trunking passing through walls in enclosed electrical installations. These systems prevent fire and smoke from spreading through open cable pathways, maintaining circuit integrity and code. Cable tray installation must comply with specific technical standards to ensure electrical safety, system reliability, and long-term maintainability.
