

High-voltage distribution box copper wire direct board

Overview

Commonly known as DCB's, Load Centres or Gate End Boxes, these units are designed in Australia and provide the maximum protection for compact LV distribution centres at 415V and 1000V. The DCB provides distribution for up to 8 outlets and can be the main LV hub in an area of. The REDline Power Box Hybrid integrates circuit board technology and copper bars for high currents. This has numerous advantages, including the following: Open Data Sheet Tell us your requirements and receive a proposal including a placement suggestion within the shortest possible time. Also, the soldering of the components to the PCB is no longer necessary. Like all KISSLING products, the PCB boards have been developed. View the TI High-voltage power distribution box block diagram, product recommendations, reference designs and start designing.
