

Hole spacing dimensions of U-shaped steel cable trays

Overview

Standard rung spacing is ventilated (maximum opening of 52 mm), 150 mm, 225 mm, and 300 mm. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. Ladder cable tray is available in widths of 6, 9, 12, 18, 24, 30, 36, 42 and 48 inches with rung spacings of 6, 9, 12 or 18 inches. A fabricated structure consisting of integral or separate longitudinal rails and a bottom having openings sufficient for the passage. In practice, cable tray dimensions are a system of interrelated measurements —width, depth, length, and material thickness—that directly affect cable fill compliance, heat dissipation, structural loading, and long-term expandability. Featuring a unique cross slot pattern, this cable tray pattern has been developed to our high integrity wrap over couplers.
