

How to find the Estonian telecommunications splitter

Overview

This initiative allows non-Estonians to become "digital residents" and access Estonian e-services, including registering an EU-based company. The program aimed to create a digital society of ten million e-residents by 2025. Overview Telecommunications in Estonia describes the infrastructure, market, and regulatory environment for. Prior to Estonia's independence in 1991, the country had poorly developed telecommunications infrastructure from the Soviet era. In 1992, all international calls from the country were still routed through the Soviet Union. Estonia's telecommunications market has a mix of established Nordic-owned operators and innovative local companies. The market is mainly controlled by three major (MNOs) and numerous smaller operators. As of 2021, Estonia's telecommunications infrastructure is highly advanced, shown by its widespread fiber-optic cable systems and comprehensive mobile coverage. • Fixed-line telephone: There were approximately 1.5 million fixed-line telephone numbers in Estonia. Estonia's rapid advancements in digitalization helped bolster the country's digital space and leaped its IT stage from an early start. Every Estonian citizen is issued a unique 11-digit digi.
