

ISA relay protection tester return time

Overview

Product comes new from manufacturer, available in 4-6 weeks. This protective relay test set is designed to give the commissioning engineers a multitasking and highly reliable testing equipment. 6 Current and 4 Voltage. used for relays tripping. For relay testing applications within IEC 61850 substations it is necessary to access to these data. By means of a dedicated hardware and the TDMS software, ISA DRTS. Modern test sets generate defined test currents and voltages and simulate fault conditions to verify tripping times, characteristics, pick-up values and selectivity of protection functions. ISA software policy allows the user to download from our website user area all the new releases of TDMS completely free of charge. Unlike most 3-phase relays test sets, ISA have developed an. RELTEST 1000 is an advanced multi-functional relay test set, designed for the testing of modern (numeric) protection relays used in distribution, transmission, smart grid and renewable energy plants.
