Intelligent Cable Tray Production

Overview

The cable tray production line is an intelligent mechanical integrated system designed for the production of cable tray systems, which realizes the precise forming of the bridge structure through automated processes. At Aparna Rollform, cable tray systems are engineered to. Second, connectivity through the Internet of Things (IoT) is crucial because sensors need to send their data somewhere. Wireless protocols like Wi-Fi, Bluetooth, Zigbee, or LoRaWAN let sensors send data without extra wires, which makes. Have you ever wondered how these uniform trough-type cable trays are manufactured efficiently and precisely?

This video takes you through our highly automated cable tray machine production line. You'll witness how a coil of metal strip is transformed into standardized, ready-to-install cable trays. Cable Trays are C-shaped metal profiles used to support and protect electrical and data cables within data centers. It is easy to operate and maintain, can have a number of custom specifications, and is able to.
