Latest Inspection Standards for Optical Cable Survey Instruments

Overview

Here, we explore three critical standards every telecom and technology organization should understand: prEN IEC 60794-1-117:2025, SIST EN 13757-3:2025, and SIST EN IEC 60794-2-20:2025. In the previous article, we introduced that the inspection test of the optical fiber cabling can refer to the international standard ISO/IEC 14763 - 3 which has now been updated to the 2024 version. Use proper testing methods like one-cord referencing, visual inspections, and calibrated equipment to get accurate and repeatable results. These include IEC, TIA/EIA, ITU and BSI to name but four. These cover mechanical cable test methods, application protocols for metering devices, and the family. Industry standards for optical fiber cables, components, systems and applications continually evolve and progress in an effort to ensure interoperability, performance, uniform testing and support for the latest technologies, bandwidth demand and industry initiatives. Optical power, required for measuring source power, receiver power and, when used with a test source, loss or attenuation, is the most.
