

Multimode fiber wavelength 820

Overview

What wavelength can be used for your serial to fiber converters that have multimode fiber?

Our multimode (mm) Serial to Fiber converters use 820 nm Wavelength. Multimode 820 nm Fiber Optic Transmitters, Receivers, Transceivers are available at Mouser Electronics. The Broadcom® 820-nm Miniature Link Series of components are designed to provide cost-effective, high-performance fiber-optic communication links for information systems and industrial applications with link distances of several kilometers. With the HFBR-24x6Z, the 125-MHz analog receiver, data. The Westermo MD-62 is a robust and reliable RS-232 to fiber optic converter designed for point-to-point communication. This results in modal dispersion, which can limit the distance over which the fiber can operate without significant signal degradation.
