POE Switch Module Manufacturers

Overview

Power-over-Ethernet (PoE) Switch is a type of network switch that has the ability to supply power to specific devices. Depending on the method, there are two main types of PoE switches: active PoE and passive PoE.Power-over-Ethernet (PoE) Switches are used in conjunction with PoE-enabled devices such as IP phones, wireless access points, and network cameras. They are especially beneficial in environments where cabling is a constraint.An Ethernet cable has eight signal lines, four of which are used for data transmission and the other four for DC power supply. Power-over-Ethernet (PoE) Switch superimposes DC voltage on the signal lines for power supply in addition to the signal lines for transmission and reception at the ports where power is supplied.
