

Peru Optical Line Terminal Parameters

Overview

8 GPON Ports: Supports 1:128 splitting ratio for every port—up to 1024 ONTs by one device. High-Speed Uplink Ports: Provides 2× 10GE SFP+ ports and 1× gigabit uplink port. Our SDX 6000 Series of software-defined optical line terminals (OLTs) consists of open and disaggregated access devices that support a broad range of PON standards, including 10G Combo PON, XGS-PON, GPON, and 10G-EPON. These devices are built using modern design principles. It provides two main functions: to perform conversion between the electrical signals used by the service provider's equipment and the. Taikan's Optical Line Terminal (OLT) utilizes Gigabit Ethernet Passive Optical Network (GEPON) technology. Our silicon devices have been interoperability-tested, field-proven and adopted by various worldwide operators and carriers. There are two FTTH architectures that are widely used. It refers to a specific parameter, component, or methodology used in the design, analysis, or measurement of radio frequency systems.

Optical line termination

An optical line termination (OLT), also called an optical line terminal, is a device which serves as the service provider endpoint of a passive optical network. It provides two main functions: 1. to perform conversion between the electrical signals used by the service provider's equipment and the fiber optic signals used by the passive optical network.
