

Specifications of a Six-Sequence Current Protection Tester

Overview

10 Channels (6x35A & 4x310V) outputs, Each output channels are independent and simultaneous control of magnitude, Phase angle and frequency values, able to inject DC, AC sine wave and up to 60x harmonics. Variable battery simulator, DC 0-350V, 140Watts max. Transient play back. The CMC 356 is the universal solution for testing all generations and types of protection relays. Its powerful six current sources (three-phase mode: up to 64 A / 860 VA per channel) with a great dynamic range, make the unit capable of testing even high-burden electromechanical relays with very. The six-phase sequence current protection tester is an advanced device used to verify complex protection devices. Fully. TEST-630 six phase microcomputer protection relay test kit is a smart relay test equipment which offers all the characteristics and functions needed for protective relay testing, in a manual or automatic mode, designed for using on site or in the laboratory. It uses the latest generation of. JBC-806tester can simultaneously output standard six-phase current and six-phase voltage with 30A/phase current and 125V/phase voltage.
