

The cable tray opening is too small

Overview

Overcrowding cables or using a small tray can cause electrical interference, overheating, and poor performance. Cables generate heat, and if the tray is too small or packed too heavily, heat dissipation will be insufficient, potentially leading to cable failure. Selecting the appropriate cable tray dimensions and size is essential for many kinds of reasons: The size of the cable tray has to be suitable on account of the kind of cables and the number of cables that it will carry. A tray that is too small will overheat and physically damage, and too large tray will drain the project budget. Solution: Calculate the cable volume and ensure the tray can handle the load with some room. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray.
