

Tonga Connector Communication Optical Cable

Overview

Tonga Cable System is a submarine fiber-optic cable system connecting Tonga with Fiji, where it connects to other international networks. It is 827 kilometres (514 mi) long and was activated in 2013. It has cable landing points at Sopo, a suburb of Nuku'alofa in Tonga, and Suva, Fiji. Not a metro area, not a data center cluster — a sovereign nation of roughly 105,000 people, spread across an archipelago of more than 150 islands in the South Pacific, whose international connectivity depends on a. The Tonga-Fiji Submarine Cable Project will support the Government of Tonga to establish an 827 kilometer (km) submarine cable link and a landing station to enable Tonga to access the international communications network at a lower cost and with a high capacity. We're working with the Governments of Tonga and New Zealand to build a new international undersea telecommunications cable to Tonga.
