

# What are the specifications for perforated aluminum plates used in distribution boxes

## Overview

Standard DIN 24041  $\neq$  ISO 7805 is applicable to perforated plates, DIN 4185 to sieve bottom, DIN 4187, part 1 to 3  $\neq$  ISO 3310, part 2 to test sieves. Standard sizes of sheets and plates are supplied without cutting after perforation and levelling. It covers technical information on product design, customisation, specification, fixing systems, substrates, finishes, and 101 standard designs shown in. 1050A is a specification that is widely used for general metalworking and fabrication purposes. It also has good corrosion resistant and welding qualities. 5005 is the architectural grade normally selected, when the sheets are to be anodised. Tolerances may be larger than the steel mill. Aluminum perforated sheet is a versatile engineered material prized across industries for its blend of functionality and aesthetics.
