

What category of equipment does an optical module belong to

Overview

As an essential component of optical fiber communication, optical modules are optoelectronic devices that facilitate the conversion between optical and electrical signals during the transmission process. The optical module, known as Optical Transceiver in English, is a general term for various module categories, including optical receiver modules, optical transmitter modules, optical transceiver modules, and optical forwarding modules. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside. What is an Optical Module?

The Ultimate Guide to Principles, Types, and Troubleshooting Optical Modules (also known as Optical Transceivers) are critical components in fiber optic communication systems. All optical modules are hot swappable. eSFP: enhanced small form-factor pluggable.
