

What equipment is used for railway relay protection

Overview

Differential relays are used to protect transformers, generators, and busbars in railway substations. They compare the current entering and leaving a protected zone. Any discrepancy between these currents, indicative of a fault within the zone, triggers the relay to isolate the. ABB's time relays are used in railway applications worldwide and have proven their excellent functionality in daily use, even under the toughest conditions. For example, safety relays are used in the following railway technology applications: In addition, Hengstler safety relays ensure that trains are automatically. Protection relays are essential components in the electrical systems of railways. This prevents damage to. For the protection, control and monitoring of your complete 16. 7 / 50 / 60 Hz railway systems, the RER670 is your most reliable and future proof companion.
