

Which side is the electrical distribution box on in a low-rise building

Overview

From the transformer's low-voltage side (0.4 kV), power is distributed to a main distribution panel (primary distribution box). Bottom Line Up Front: Your home's distribution box (electrical panel) is typically located in the basement, garage, utility room, or mounted outside near your electrical meter. To find it quickly, look for a rectangular gray metal box about the size of a medicine cabinet, often positioned close to. A low-voltage network or secondary network is a part of electric power distribution which carries electric energy from distribution transformers to electricity meters of end customers. Secondary networks are operated at a low voltage level, which is typically equal to the mains voltage of electric. In the United States, power companies provide electricity to medium or large buildings at 13,800 volts (13.8 kV). For small commercial buildings or residential customers, power companies lower the voltage with a transformer on a power pole or mounted on the ground.
